

1. Process Flow

For all trucks, the following process flow must be followed:

Security Inspection → Data Entry in SAP → Store Approval → Vehicle Check-In → 2nd Weighment Entry → Store Acknowledgement → Vehicle Exit

Each vehicle must pass through these stages sequentially before exiting the facility.

2. Security Inspection

The security guard performs the initial inspection and records vehicle details in the system.

2.1 Vehicle Type Selection

Select the applicable vehicle category:

Vehicle Type	Operation
RMS	Unloading
Scrap	Loading
Engineering	Loading & Unloading
Finished Goods	Loading & Unloading
Others	Food Vehicle for Canteen

2.2 Vehicle Details

The following information must be captured:

- Vehicle Registration Number
- Driver Name
- Driver Mobile Number

2.3 Security Checklist

Security verifies predefined checklist items.

- Checklist Name
- Verified (Checkbox)

2.4 Vehicle Image Capture

- Capture and store a photograph of the vehicle.

3. Data Entry Operator (SAP Entry)

3.1 Vehicle Queue

- The Data Entry Operator should be able to view all vehicles that:
 - Have completed **Security Inspection**
 - Are **waiting for SAP entry**
- Note: SAP entry is **mandatory for all vehicle types**.

3.2 SAP Entry

- The operator manually enters the vehicle details into the SAP system.

3.3 Confirmation of SAP Entry

- Once SAP entry is completed:
 - Operator selects the record
 - Marks **SAP Entry Completed**
 - Clicks **Save**

3.4 Notification

- After saving, email notification will be sent to the relevant team.

Example:

Vehicle Type	Email
RMS	rms@ceat.com

3.5 SAP Downtime Scenario

If SAP is unavailable:

- A mechanism must be defined to handle this situation.

3.6 SAP Integration (Data Fetch)

TouchPoint should send the **Vehicle Number** to SAP and retrieve:

- Gate Entry Number / GRN Number
 - Material Name
 - Vendor Name
 - PO Quantity
-

4. Store Approval

After SAP entry confirmation, the request moves to the **Store Team**.

4.1 Store Review

The store user can review:

- Vehicle details
- Material details
- Vendor information

4.2 Store Decision

The store user can choose:

- Allow
- Wait

4.3 Escalation

If no decision is made within **X minutes**:

- Email notification is sent to:
 - Store Team
 - Security Guard

4.4 Gate Permission

If **Allowed**, the security guard will be able to allow vehicle entry via the boom barrier and they should be able to see in the application that the store has marked the entry as “Allow”

5. Vehicle Check-In

5.1 ANPR Based Entry

Vehicle entry will be triggered through:

- **ANPR (Automatic Number Plate Recognition)**
- Store Approval

Once both conditions are satisfied:

- Boom barrier opens automatically.

5.2 Check-In Time Capture

ANPR system captures the **Check-In Time**.

TouchPoint will fetch this periodically using a **scheduler**.

5.3 Check-In Time Window

After store approval:

- The vehicle must check-in within **X minutes**.

If not:

- Alert email sent to:
 - Security
 - Store team

5.4 Manual Check-In

If ANPR is not working:

- Security can manually mark **Vehicle Check-In**
- System records that it was **Manual Check-In**

5.5 Expected Exit Time

Based on check-in time:

Expected exit time = **Check-In Time + 5 Hours (approx.)**

If vehicle does not exit within this time:

- **Overstay Alert** sent to:
 - Store Team
 - Security Guard

6. Weighbridge Operator Approval

6.1 Weighment Completion

The weighbridge operator indicates: **Weighment Completed**. This means weight details are entered into SAP.

6.2 SAP Weight Integration

TouchPoint retrieves weight details from SAP:

- First Weight
- Second Weight
- Net Weight

These details will be displayed to the Store Team.

7. Store Acknowledgement

7.1 Store View

The store team will see:

- Vehicle Number
- Material Details
- Initial Weight
- Second Weight
- Net Weight

7.2 Weight Validation

The system compares **Net Weight** with **Threshold Values**.

Condition	Status
Within threshold	OK
Less than threshold	Shortage
Greater than threshold	Excess

7.3 Store Action

Store user can select:

- Acknowledged

- Damaged

Remarks field should be available.

Note: Acknowledgement is **at gate pass level**, not at material level.

8. Vehicle Check-Out

8.1 Exit Permission

- After store acknowledgement, Vehicle is allowed to exit the premises.

8.2 Exit Detection

Vehicle check-out can happen via:

- ANPR System
- Manual Check-Out (if ANPR fails)

8.3 Exit Time Capture

If ANPR is used:

- TouchPoint retrieves **Check-Out Time** via scheduler.
